### **Guest Room Heating and Air Conditioning:**

Thermostat Information – Current Setting: **AC**. The heating and cooling system in our guest rooms operate as one unit. Simply, our guest rooms can have either heat or cooling, but not both at the same time. Therefore, during the winter months (October-April) the system will be set to provide heat. During the summer months (May - September), the system is set to only allow cooling. If the thermostat is turned to cooling when only heat is available, all that will happen is that more heat will be produced. If you need assistance working your thermostat, please call the front desk.
